The following are the steps following via Natural Deduction to prove that box 2 must contain white balls ($C2W$).

- | | |
|---|---|
| 31. $\neg C3B$ (M.P. on 27) | 36. $C2W \vee C2B$ (M.P. on 8) |
| 32. $C3B \vee C3Y$ (M.P. on 9) | 37. $\neg C1Y$ (Conj. Elimination on 34) |

- | | |
|----------------------------------|----------------------------------|
| 1. $O1Y$ | (b) $\neg C2Y \vee \neg C3Y$ |
| 2. $O2W$ | 15. (a) $\neg C2B \vee \neg C1B$ |

3 Tic-Tac-Toe

For the first set of rules, we have rules that state whenever X can win, we should make that move. This might be obvious, but needs to be defined in the knowledge base.

- | | |
|---------------------------------------|---------------------------------------|
| 1. $CanWinX_{11} \implies MoveX_{11}$ | 6. $CanWinX_{23} \implies MoveX_{23}$ |
| 2. $CanWinX_{12} \implies MoveX_{12}$ | 7. $CanWinX_{31} \implies MoveX_{31}$ |
| 3. $CanWinX_{13} \implies MoveX_{13}$ | 8. $CanWinX_{32} \implies MoveX_{32}$ |
| 4. $CanWinX_{21} \implies MoveX_{21}$ | 9. $CanWinX_{33} \implies MoveX_{33}$ |
| 5. $CanWinX_{22} \implies MoveX_{22}$ | |

Next, we need to define when $CanWinX$ for all positions. This is true when there are two positions with X in them that can make a line (Vertically, horizontally, or diagonally). We do not care about the rest of the pieces on the board since X can win in the current turn.

| 11. $\{X_{11} \wedge ?_{22} \wedge X_{33}\} \implies CanWinX_{22}$ | 23. $\{X_{13} \wedge X_{23} \wedge ?_{33}\} \implies CanWinX_{33}$ |
| 12. $\{X_{12} \wedge ?_{22} \wedge X_{32}\} \implies CanWinX_{22}$ | 24. $\{X_{31} \wedge X_{32} \wedge ?_{33}\} \implies CanWinX_{33}$ |

Now we must define all the possible moves that are necessary because of a force move:

- | | |
|---|---|
| 1. $ForcedMoveX_{11} \implies MoveX_{11}$ | 6. $ForcedMoveX_{23} \implies MoveX_{23}$ |
| 2. $ForcedMoveX_{12} \implies MoveX_{12}$ | 7. $ForcedMoveX_{31} \implies MoveX_{31}$ |
| 3. $ForcedMoveX_{13} \implies MoveX_{13}$ | 8. $ForcedMoveX_{32} \implies MoveX_{32}$ |
| 4. $ForcedMoveX_{21} \implies MoveX_{21}$ | 9. $ForcedMoveX_{33} \implies MoveX_{33}$ |
| 5. $ForcedMoveX_{22} \implies MoveX_{22}$ | |

To help with readability, we define a rule for our knowledge base that is true when no possible moves for X will result in a win for X :

$$\begin{aligned}
& \neg CanWinX_{11} \wedge CanWinX_{12} \wedge CanWinX_{13} \wedge CanWinX_{21} \wedge \\
& CanWinX_{22} \wedge CanWinX_{23} \wedge CanWinX_{31} \wedge CanWinX_{32} \wedge CanWinX_{33} \\
& \implies CannotWinX
\end{aligned}$$

Using the above rule and the possible winning conditions for O (The other player), we can write rules for our knowledge base that state that if O can win and X cannot win in the current move, we must make a forced move. This will lead to a priority of winning moves over forced move for X .

1. $CanWinO_{11} \wedge CannotWinX \implies ForcedMoveX_{11}$
2. $CanWinO_{12} \wedge CannotWinX \implies ForcedMoveX_{12}$
3. $CanWinO_{13} \wedge CannotWinX \implies ForcedMoveX_{13}$
4. $CanWinO_{21} \wedge CannotWinX \implies ForcedMoveX_{21}$
5. $CanWinO_{22} \wedge CannotWinX \implies ForcedMoveX_{22}$
6. $CanWinO_{23} \wedge CannotWinX \implies ForcedMoveX_{23}$
7. $CanWinO_{31} \wedge CannotWinX \implies ForcedMoveX_{31}$
8. $CanWinO_{32} \wedge CannotWinX \implies ForcedMoveX_{32}$
9. $CanWinO_{33} \wedge CannotWinX \implies ForcedMoveX_{33}$

We then must define winning conditions for O . This is exactly the same as the set of winning conditions for X defined above.
